

Introducing ... *The Sustainable Scoop*

from the Office of Ecological Sustainability

Did you know?

In one teaspoon of soil, there are more microorganisms than there are people on Earth.

<https://www.bbc.co.uk/ideas/videos/why-soil-is-one-of-the-most-amazing-things-on-earth/p090cf64>

That's a lot of life teeming underground!

Animals and microorganisms (like fungi) living in the soil play an invaluable role in our ecosystems.

AND it takes more than 100 years to form just half a centimeter of soil – what a valuable resource!
